EDUCATION

University of California, Davis

Bachelor of Science in Computer Science

Dec 2025

EXPERIENCE

Software Engineer | ASUCD (Part-Time)

Oct 2024 – Dec 2025

- Developed REST API for transit analytics, querying **7M+** PostgreSQL records with sub-200ms latency
- Led roadmap, sprints, code reviews for a 5-person team, shipping stat summary and peak analysis features on time
- Built Flask backend (**20+ endpoints**) on AWS EC2 with optimized dependencies, reducing Docker images by **55%**
- Designed query routing system using **5-digit codes** to map user requests to parameterized SQL templates

Software Engineer Intern | AggieWorks (Part-Time)

Oct 2024 – Dec 2025

- Scaled product to **1M+** views and **21K+** unique users by building site using Vite, FastAPI and Oracle Cloud
- Developed a **course search engine**, built ETL pipelines using PySpark and Playwright, extracting **242K+** reviews
- Optimized fetching with TanStack Query and Cloudflare caching, reducing API calls and cutting load times by **11x**

Software Engineer Intern | CodeLab

Oct 2023 – Jun 2024

- Created a web app with a spaced-repetition engine (SRS) backend, to aid students' study habits
- Partnered with designers to implement features from Figma wireframes using TypeScript, Tailwind and React.js
- Supported **33K+** users by implementing React components and REST API endpoints in Node and Express.js

PROJECTS

MemoCheck | Python, LiteLLM, Pydantic, DeepEval, Postgres

Jun 2026

- Built an eval suite measuring how reliably 4 frontier LLM models extract structured intent from noisy transcripts
- Designed a **deterministic scorer** (sentence-embedding + Hungarian matching) to replace LLM-as-judge bias
- Drove an eval-driven v0 to v1 change that **cut hallucination ~60%** (0.057 to 0.023) and lifted type accuracy to **99.7%**
- Persisted 700+ runs to Postgres with resumable execution and a frozen snapshot for **reproducible results**

Crash Test | TypeScript, Python, Convex, Mastra, Moss, Google Gemini

Nov 2025

- Invited to Y Combinator's office for a hackathon, won **\$5K+ in awards** by building an **AI QA engineer**
- Engineered a multi-agent system using Mastra, Moss, and Convex to bridge static analysis with live testing
- Deployed LLM agents to read source code, find bugs like SQL injections, and execute real-world exploit tests

Sixth-Degree | Go, TypeScript | 80 Stars | 12 Forks

Sep 2025

- Resolved a **5-minute P95 latency to 15s** under a 500-user load by re-architecting the WebSocket data pipeline
- Architected a Go backend BFS shortest paths on **10K+ node graphs**, streaming traversal via WebSockets
- Built a concurrent Go pipeline with worker pools to process 10K+ Wikipedia pages into a graph in **~3.4 minutes**
- Deployed a minimal, secure **~5 MB Docker image** to Google Cloud Run via a CI/CD pipeline in GitHub Actions

Scrappy | TypeScript, Next.js, Supabase

Feb 2025

- Engineered a real-time task board, achieving **80% adoption** among 90 UC Davis Hacknight members in 5 weeks
- Supported **20+ concurrent sessions** using Supabase Realtime and query optimizations for low-latency updates
- Cut render time by **40%** with SSR and client-side caching by eliminating unnecessary re-renders

TECHNICAL SKILLS

Languages: Python, TypeScript, Go (Golang), JavaScript, Java, SQL (Postgres), C++, HTML/CSS

AI & LLM: Claude Code, Mastra, sentence-transformers, Whisper, LiteLLM, DeepEval, OpenAI/Anthropic/Gemini APIs

Developer Tools: Git, GitHub Actions, Docker, AWS, EC2, Lambda, Google Cloud, Google Cloud Monitoring, Postman, Prisma, MongoDB, Redis, Tailwind CSS, Firebase, Supabase, React, Node.js, Flask, FastAPI, Next.js, Express.js
